

 LeMans II

LeMans II

LeMans II – Following a long line of tradition.

Unmistakeable as regards form and function – And that goes not only for the Le Mans race track itself, but also for the intelligent corner unit solution from Kesseböhmer of the same name. In both cases, efficiency, innovation and emotion are the name of the game.

With new features and innovations, LeMans II is about to build on the already successful track record by taking things to a whole new level. This intelligent corner unit system is setting new standards all over again with unprecedented levels of technical quality and motions that are designed to captivate.

From perfect functionality to
captivating convenience.

CAPTIVATING CONVENIENCE

Hardly any effort is required to make the shelves emerge from the cup-board so that you can constantly keep track of what is where and access everything with perfect ease. In a nutshell, LeMans II is in pole position for efficiency and convenience.

CAPTIVATING CONVENIENCE

85°

85° opening angle – Innovation through evolution.

Building on a classic: The convenient processes that were typical of the LeMans have been improved even further on the LeMans II. The shelf contour is now even better. As well as making technical planning more straightforward it also ensures that the product continues to function fully and conveniently even when the front panels are opened to an angle of 85°.

Intelligent: The handles on adjacent cupboards do not cause an obstruction during opening. This makes it easier to plan reliably and ensures user-friendliness during day-to-day use. Even when you do not have very much room to play with, the high-quality front panel remains protected at all times. LeMans II offers greater flexibility in terms of configuration and is ideal for overcoming space restrictions in an even wider range of situations.

25 KG BEARING CAPACITY

25 kg bearing capacity – Plenty of room, even for heavy weights.

From a technical perspective, the bearing capacity of the shelves on the LeMans II has been increased by another 5 kilograms. This means that each individual shelf can now easily bear a weight of 25 kilograms. Consequently, the shelves are practically impossible to overload. With an overall capacity of 50 kg and its perfect convenience, the LeMans II could indeed be described as THE perfect corner unit.

 LeMans II

LEMANS II FROM KESSEBÖHMER

HEIGHT-ADJUSTABLE

High or low: LeMans II is impressively flexible.

Greater efficiency and flexibility: LeMans II makes the assembly process easier and saves time as well thanks to the optimised ClickFixx assembly system. What's more, it is now more straightforward with regard to materials, with fewer screws required.

In addition, the body side is reinforced and you can even adjust the height of the shelves later on whenever you want during day-to-day use. Intelligent details mean impressive convenience.

 LeMans II

Tip-top technology and sheer captivation.

Highly advanced technology results in perfect convenience: For example, as soon as the shelf is two thirds of the way into the cupboard, the cushioned mechanism is triggered so that the drawer of the LeMans II can be closed automatically. This optional self-closing mechanism means that the drawers close almost silently and offer optimum convenience.

The powerful emotional connection between product and user, the innovative technology and the optimised assembly process based on ClickFixx all work together to create these impressive solutions. LeMans II is setting new standards – Why not see for yourself?
